Microdermabrasion: a non-invasive method of mechanical exfoliation. Softens fine lines and wrinkles, helps smooth skin texture, decreases the appearance of acne scarring and manages breakouts, decreases pore size and reduces skin discoloration. A series of 4-6 treatments is recommended to achieve results.

Chemical Peels: A chemical exfoliation of the outermost layer of the skin called epidermis. It loosens and removes dead skin cells revealing a much healthier and radiant appearance. It treats dull skin, aging skin, fine lines and skin discolorations. There are different types and depth of peels; we offer very superficial to superficial peels, requiring minimum to no down time. A series of 4 to 6 treatments is recommended to achieve results.

Enzymes: Most enzymes come from a natural source of fruits; therefore, it is a natural form of shedding dead skin cells. It accelerates the process of skin replacement, cleanses pores and improves skin tone and texture. A series of 4-6 treatments is recommended to achieve results.

Hydra Infusion: It infuses cosmeceuticals grade serums into the skin to aid skin concerns such as acne, dryness, discoloration and rejuvenation. Great addition to any treatment!
